-i- FUNCTION: BINDS FERRIENTEROBACTIN; PART OF THE BINDING-PROTEIN-

DEPENDENT TRANSPORT SYSTEM FOR UPTAKE OF FERRIENTEROBACTIN.

-i- SUBCELULAR LOCATION: PERIPLASMIC.

-i- INDUCTION: CONTROLLED IN PART BY THE AMOUNT OF AVAILABLE IRON.

-i- SIMILARITY: BELONGS TO THE BACTERIAL EXTRACELLULAR SOLUTE-BINDING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  spirochete.";
Science 281:375-388(1998).
-:- FUNCTION: CELL WALL FORMATION (BY SIMILARITY).
-:- CATALYTIC ACTIVITY: UDP-N-acetylmuramate + NADP(+) =
acetyl-3-O-(1-carboxyvinyl)-D-glucosamine + NADPH.
-:- COPACTOR: FAD (BY SIMILARITY).
-:- PATHWAY: Peptidoglycan biosynthesis.
-:- SUBCELLULAR LOCATION: Cytoplasmic (Probable).
-:- SIMILARITY: BELONGS TO THE MURB FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Fraser C.M., Norris S.J., Weinstock G.M., White O., Sutton G.G., Dodson R., Gwinn M., Hickey E.K., Clayton R., Ketchum K.A., Sodergren E., Hardham J.M., McLeodd M.P., Salzberg S., Peterson J., Khalak H., Richardson D., Howell J.K., Chidambaram M., Utterback T., McDonald L., Artiach P., Bowman C., Cotton M.D., Fujii C., Garland S. -!- FUNCTION: TUBULIN IS THE MAJOR CONSTITUENT OF MICROTUBULES. IT
BINDS TWO MOLES OF GTP, OND AT AN EXCHANGEABLE SITE ON THE BETA
CHAIN AND ONE AT A NONEXCHANGEABLE SITE ON THE ALPHA-CHAIN.
-!- SUBUNIT: DIMER OF ALPHA AND BETA CHAINS.
-!- SIMILARITY: BELONGS TO THE TUBULIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

Patent No. 5882851

GENERAL INFORMATION:

APPLICANT: Koch, Birgit M.
APPLICANT: Halkier, Barbara Ann
APPLICANT: Halkier, Barbara Ann
APPLICANT: Moller, Birger L.

TITLE OF INVENTION: Cytochrome P-450 Monooxygenases
NUMBER OF SEQUENCES: 24

CORRESPONDENCE ADDRESS:

ADDRESSEE: No. 5882851artis Corporation
STREET: 3054 Cornwallis Road
CITY: Research Triangle Park
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COUNTRY: USA
ZIP: 27709
ZIP: 27709
COMPUTER LEADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DGS/MS-DGS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION NUMBER: US/08/656,177A
FILING DATE: 08-AUG-1996
CLASSIFICATION: 800
ATTORNEY/AGENT INFORMATION:
NAMME: Meigls, J. Timothy
REGISTRATION NUMBER: 38,241
